

Florent

Florent suffers from severe rickets. His mother died giving birth and his father fled the responsibility of raising a small child. The sister of the grandfather of the father's side has looked after the little boy ever since. But a severe form of rickets has developed through ignorance. At the beginning of April 2021, we hired a young woman to prepare calcium-rich food for him every day and to watch him eat. She also supervises the sun baths.

Today he can already play soccer and dance. But the diet will continue until March 2022, so that the bones are well strengthened. Only then can a decision be made as to whether an operation will be necessary.
